The University of Florida's Department of Aging and Geriatric Research is seeking a tenure-track translational researcher to contribute to our Department and Institute's missions to advance independently funded collaborative cutting edge, translational research focused on age-related memory loss, cancer, physical and cognitive disability, contribute to graduate, post-graduate and junior faculty mentoring.

The candidate will bring significant contributions to the overarching research themes and goals for the department and institute: improving the health, independence and quality of life of older adults by means of interdisciplinary teams in areas of research, education and health care.
